

**Directions: Shake well before use.**

**Step 1:**

**Spray surface lightly with Eco D Wash, working on small areas e.g. bonnet wing, door etc.**

**Step 2:**

**Spread with a soft cloth, leave product on surface for 30 seconds.**

### Step 3:

Simply wipe off Eco D Wash with a clean cloth. The finished surface is now washed and polished.

### Helpful Hints

- In very hot weather it is better to work on small areas at a time.
- Do not spray on excessive amounts of Eco D Wash.
- For best result use two microfibre cloths, one for cleaning and one for buffing.
- Eco D Wash can be used under direct sunlight. However, it will dry very quickly in which case we advise you to work in the shade.
- When washing small areas, or near rubber trim, spray Eco D Wash onto the cleaning cloth then apply to the surface.
- During washing, shake the bottle, this will keep the Eco D Wash well mixed and produce consistent results.
- Eco D Wash will remove caked on mud. More than the normal amount of the product will be needed.
- When using the cloths available through this website, use the first cloth (microfibre towel) to apply the product.
- If the first/application cloth becomes dirty, shake cloth well, away from car. This will remove any caked on dirt.
